

Combining WMV videos in Windows Media Player

© Jan Smith, CompuSew with Jan

First, be sure you have downloaded videos into a specific folder for that particular subject.

- Open Windows Media Player and if it fills your monitor screen, make it smaller.
- Click on "Now Playing" in the top toolbar. If you do NOT see the "List Pane" on the right side of the screen, click on the little down arrow right under the Now Playing icon and click on "Show List Pane."
- Open the folder where your videos are located and drag the videos for that subject into the List Pane. If they are out of order, right-click on one and select move up or move down.

Now your videos for that subject will play in the order recorded.
